An information about Schneider agricultural devices

Volume Buckets: For higher efficiency!

Our **volume buckets** are ideal for loading and transporting free-flowing bulk materials such as wood chips, sand, grain and mineral fertiliser.

The **depth of 1,000 mm** provides a large volume. The **conical design without a centre bar** allows the bulk material to slide off easily.

Art-No.	Width Max.	Volume	Depth	Weight
125.035.016	1,600 mm	770 ltr	1,000 mm	220 kg
125.035.018	1,800 mm	870 ltr	1,000 mm	250 kg
125.035.020	2,000 mm	970 ltr	1,000 mm	280 kg
125.035.022	2,200 mm	1,070 ltr	1,000 mm	310 kg
125.035.025	2,500 mm	1,200 ltr	1,000 mm	340 kg

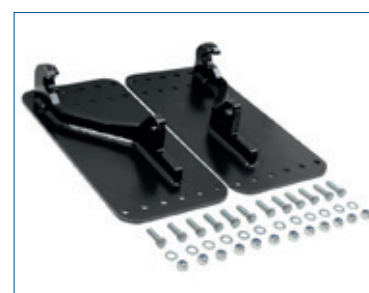

The **fully welded bucket** made of high-quality steel has **protective runners** at the bucket base.

A **hardened cutting edge (500 HB)** protects against unnecessarily high wear. The design of the bucket results in a favourable centre of gravity close to the tractor or loader.

Our **perforated plates (LP) brackets** allow the equipped devices to connect with a wide variety of front loaders, wheel loaders, telescopic handlers or farm loaders. It is also easy to change the carrier vehicle at a later date.
